

NIRAJ PATIL

Chicago, IL | +1 447-902-7504 | nirajpatil4@yahoo.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SKILLS

Product Management: Roadmap Planning, Backlog Prioritization, PRD & User Story Writing, Sprint Planning, Acceptance Criteria, OKRs, Product Positioning, GTM Strategy, Jira, Agile/Scrum

Data Science & Analytics: Python (Pandas, NumPy, Scikit-learn), SQL, Statistical Analysis, Machine Learning (Random Forest, XGBoost), A/B Testing, Feature Engineering, Time-Series Modeling, Causal Inference, Tableau

Engineering & Cloud: AWS (S3, Lambda, Glue/PySpark, Athena), Google Cloud, REST APIs, Flask, PostgreSQL, React, ETL Pipelines, GenAI/LLM Integration (Claude API, Gemini), CI/CD (GitHub Actions)

Consulting & Leadership: Technical Discovery, Requirements Gathering, Stakeholder Management, Solution Architecture, Feasibility Analysis, Cross-functional Collaboration

Certifications: IBM AI Product Manager, Agile

EXPERIENCE

AI Product Manager — Kahana, Remote, USA

May 2026 – Present

- Owned end-to-end product launch and Go-To-Market strategy for an AI-integrated browser — defined product positioning, success metrics, and launch sequencing that drove initial user adoption across target segments.
- Led cross-functional feature development by translating complex user needs and AI capabilities into prioritized engineering requirements, managing trade-offs between scope, timeline, and quality across engineering and design.

Product Manager — Saayam for all, Remote, USA

Oct 2025 – Present

- Defined full MVP product scope across 15+ service categories (housing, healthcare, finance, legal) — wrote detailed use case specs, user flows, and safety guardrails that were adopted directly by engineering as the build foundation and as ground-truth data for downstream ML model training.
- Led end-to-end requirements for volunteer geolocation feature: conducted user research with disaster relief coordinators, translated findings into GeoSpatial API integration specs, and managed engineering trade-offs across competing priorities from stakeholders.

Founder & Technical Lead — Zeno ([getzeno.io](#))

Jul 2025 – May 2026

- Took an AI fintech product from zero to 200+ users — defined the full product vision, wrote PRDs for every feature, prioritized the backlog based on direct user interviews with small business owners and freelancers, and managed 5 sprint cycles with defined goals and acceptance criteria.
- Drove 90%+ data extraction accuracy through clear QA rubrics, confidence-scoring requirements, and human-in-the-loop validation specs — outcome of precise acceptance criteria, not just engineering execution.
- Shipped accountant-ready expense analytics dashboards by iterating on user feedback from 200+ beta users, validating feature decisions through direct qualitative research and usage pattern analysis.

Strategy Consultant (Internship Practicum) — Founder Institute, Champaign, IL

May – Aug 2025

- Built technical evaluation models to assess product-market fit and partnership feasibility for 25+ institutional relationships, validating a \$5M+ revenue pipeline and surfacing go/no-go recommendations to leadership.
- Delivered implementation roadmaps for 3 pilot programs — scoped feature sets, defined API integration milestones, and managed stakeholder expectations across technical and business functions against a 60-day launch deadline.

Technology Consultant — FACES Consulting, UIUC, Champaign, IL

Aug 2024 – Jul 2025

- Led product discovery with 20+ stakeholders across two AI startups — ran structured elicitation sessions to surface unstated needs, translated findings into prioritized system architectures and product roadmaps.
- Designed Go-To-Market strategy and operational tracking frameworks that drove 15% user adoption within a 90-day pilot.

PROJECTS

HawkAI — Autonomous Entity Intelligence Agent *FastAPI, Next.js, Gemini 2.0, MCP, MongoDB Atlas*

2026

- Defined and shipped a full KYC/AML intelligence product solo in 25 days — from problem framing and architecture to deployment — generating analyst-grade risk reports in under 90 seconds; entered Google Cloud Agent Hackathon competing against 10k+ teams.

AlphaForge — ML-Powered Financial Forecasting Tool *Python, Random Forest, XGBoost, Flask*

2025

- Scoped and shipped a quantitative ML prototype predicting next-day equity prices with under 5% error — defined model requirements, validated results with stakeholders, and packaged findings into a Flask demo for non-technical audiences.

Personalized RecSys-LLM — AI Recommendation Product *Python, GROQ, Streamlit, REST API, A/B Testing*

2025

- Designed and shipped an end-to-end recommendation product with LLM-driven cold-start onboarding (natural-language preference capture), built-in A/B testing infrastructure, and a live public API with Swagger documentation and Streamlit analytics dashboard.

EDUCATION

University of Illinois at Urbana-Champaign (UIUC)

Aug 2025

Master's, Technology Management | GPA: 3.93/4.0 | Champaign, IL

Coursework: Data Science, Big Data Infrastructure, Data Storytelling, Technology Strategy

University of Mumbai

Jul 2022

Bachelor's, Mechanical Engineering | GPA: 3.7/4.0 | Mumbai, India

Coursework: Operations Research, Probability & Statistics, Systems Engineering
